

Bigarol Blackberry P

(SYM_142058, PHYT_50002) - Flavour type Red Fruit

PROFILE DESCRIPTION

Intense flavour of blackberry and wild berry rounded off with a vanilla note.

Topnote (Volatility): Blackberry
 Bodynote (Character): Wildberry
 Basenote (Longlasting): Vanilla

APPLICATION

Very good at **masking amino** and **carboxylic acids**. A good solution for **piglet** and **pig feed**.

CHEMICAL STABILITY

Product is feed acid-stable (**8**)!

(The higher the ingredients' reactivity (**1-10**), the less responsive they are to acidic or alkaline feed components.)

HEAT STABILITY

Extremely stable in mineral feed and well suited for feeds that are pelleted or expanded (heat-stable, **8**).

- 1 to 5** NOT suitable for thermal processes like pelleting
- 6 and 7** Heat-stable (flavour loss of up to 10%)
- 8,9,10** Under high-temperature conditions (<95°C), minimal flavour loss (approximately 2-5%) occurs as a result of the inherent characteristics of the flavour ingredients.

INCLUSION RATE

~200 g/t final feed.

If the feed undergoes expansion (~120°C) or extrusion (~150°C), the inclusion rate should be multiplied by 1.5.

- Piglet mineral feed (4%): 5.000 g/t
- Pig feed: 150-200 g/t

TARGET SPECIES

Also approved for Ruminants, Horses and Rodents.
