

Bigarol Extavarom P

(SYM_361790, PHYT_50046) - Flavour Type Spicy

PROFILE DESCRIPTION

Flavour, with meadow herbs and fresh honey, rounded off with vanilla- and coconut notes.

Topnote (Volatility): Meadow herbs

Bodynote (Character): Meadow herbs

Basenote (Longlasting): Vanilla, coconut, honey

APPLICATION

Flavour is suitable to use in diets for **swine** and **piglets**, and is specially adapted to the taste of pigs. It is extremely **stable in mineral feed mixtures**. Dominantly **masks** unpleasant feed intrinsic notes.

Has been specifically developed for taste and preference in swine to optimize feed acceptance. It can be used universally in **piglet** feed as well as in **pig fattening**.

Interesting: Intensity of 70% compared to Bigarol Extarom P (100%).

CHEMICAL STABILITY

The product is feed acid-stable (**8**).

(The higher the ingredients' reactivity (**1-10**), the less responsive they are to acidic or alkaline feed components.)

HEAT STABILITY

Product is heat-stable (**7**)!

- 1 to 5** NOT suitable for thermal processes like pelleting
- 6 and 7** Heat-stable (flavour loss of up to 10%)
- 8,9,10** Under high-temperature conditions (<95°C), minimal flavour loss (approximately 2-5%) occurs as a result of the inherent characteristics of the flavour ingredients.

INCLUSION RATE

~200 g/t final feed.

If the feed undergoes expansion (~120°C) or extrusion (~150°C), the inclusion rate should be multiplied by 1.5.

- Piglet mineral feed (4%): 5.000 g/t

TARGET SPECIES

Also approved for Ruminants, Poultry, Horses, Marine Animals (except for Fish) and Rodents.
