

Bigarol Troparom P1

(SYM_218561, PHYT_50033) - Flavour type Red Fruit

PROFILE DESCRIPTION

Notes of fresh, fruity raspberry-strawberry, rounded off with ripe wild berries.

Topnote (Volatility): Strawberry

Bodynote (Character): Ripe wildberries

Basenote (Longlasting): Raspberry

APPLICATION

It can be used for flavouring feeds in **swine, especially piglet feed**. The full-fruity note is highly accepted.

It can be used very effectively in **fish bait**, particularly attracting **whitefish** such as bream, tench, and carp.

CHEMICAL STABILITY

Product is feed acid-stable (6)!

(The higher the ingredients' reactivity (1-10), the less responsive they are to acidic or alkaline feed components.)

HEAT STABILITY

It is the non-encapsulated version of Bigarol Multifruit IPE (correspondingly less heat-stable, 4), BUT stable in mineral mixtures.

- 1 to 5** NOT suitable for thermal processes like pelleting
- 6 and 7** Heat-stable (flavour loss of up to 10%)
- 8,9,10** Under high-temperature conditions (<95°C), minimal flavour loss (approximately 2-5%) occurs as a result of the inherent characteristics of the flavour ingredients.

INCLUSION RATE

~200 g/t final feed.

- Piglet mineral feed (4%): 5.000 g/t
- Fish baits: 2.000 g/t of final bait

TARGET SPECIES

Also approved for Ruminants, Freshwater Fish, Poultry and Rodents.
